These facts are brought out in the following figure: --Fia. 5. Ideal geological section, showing the degradation of the tops of folds, and the direction of the force producing them. This figure serves, also, to illustrate the method of determining the direction of force in simple earth movements. The longer slope of the fold is always toward the moving force; and, after erosion has removed the tops of the folds, only the longer slope remains, as the dip of the strata. The structural features, which have been noted, may then be briefly summarized as follows: --1. The Cartersville Fault, which marks a time interval between the deposition of the semi-crystalline rocks of the Crystalline Belt and the Oostanaula Shales of the Paleozoic. 2. The apparent perfect transition between the semi-crystalline and the holo-crystalline rocks. 3. The absence, in the semi-crystalline area, of the magnesiumcorundum deposition, which...
